

How to determine the size of the VegaPay ring?

What to do first?

Print this document and superimpose your bank card on the frame on the right. The size of card should exactly match the frame's one.

If it matches, you can now determine the size. If it does not match, please check print settings- the scale should be set 100 %.

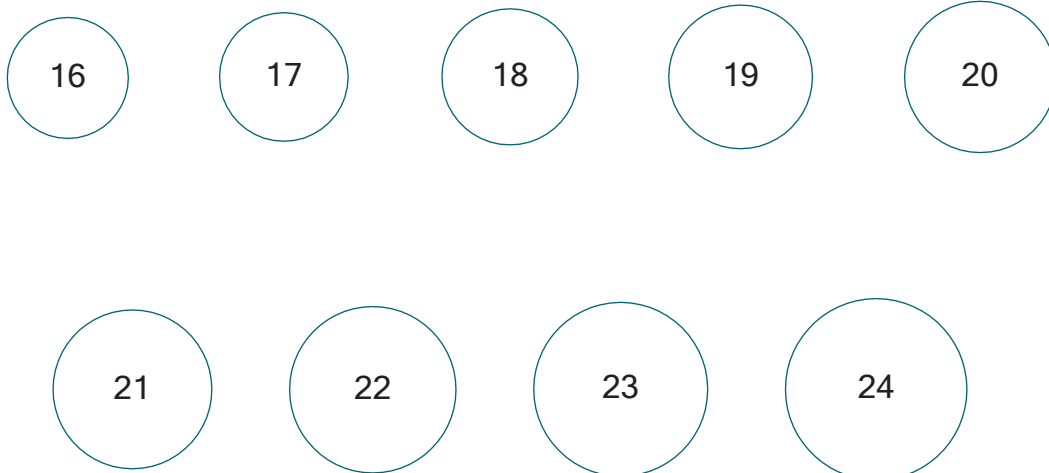

Variant 1.

The first variant to determine the size of the ring is to compare it to the rings available.

VegaPay rings are available in sizes 16-24.

In order to check the size, please take your favorite ring and superimpose it on the circles below. The inside part of the ring should coincide with the circle.

Variant 2.

Please cut with the scissors the measuring scale below and make a cut in the pointed place. Coil up the measuring scale and pass its end through the cutted place so that the scale will show your size.

Attention, please! In order to determine your size more exactly, do not make measurements when your fingers are cold. We recommend you to do it at the end of the day when the size is maximum.
